

## IND FB – INDUCTION BLADES

KK LEO FB IND NEW 16.01 EN

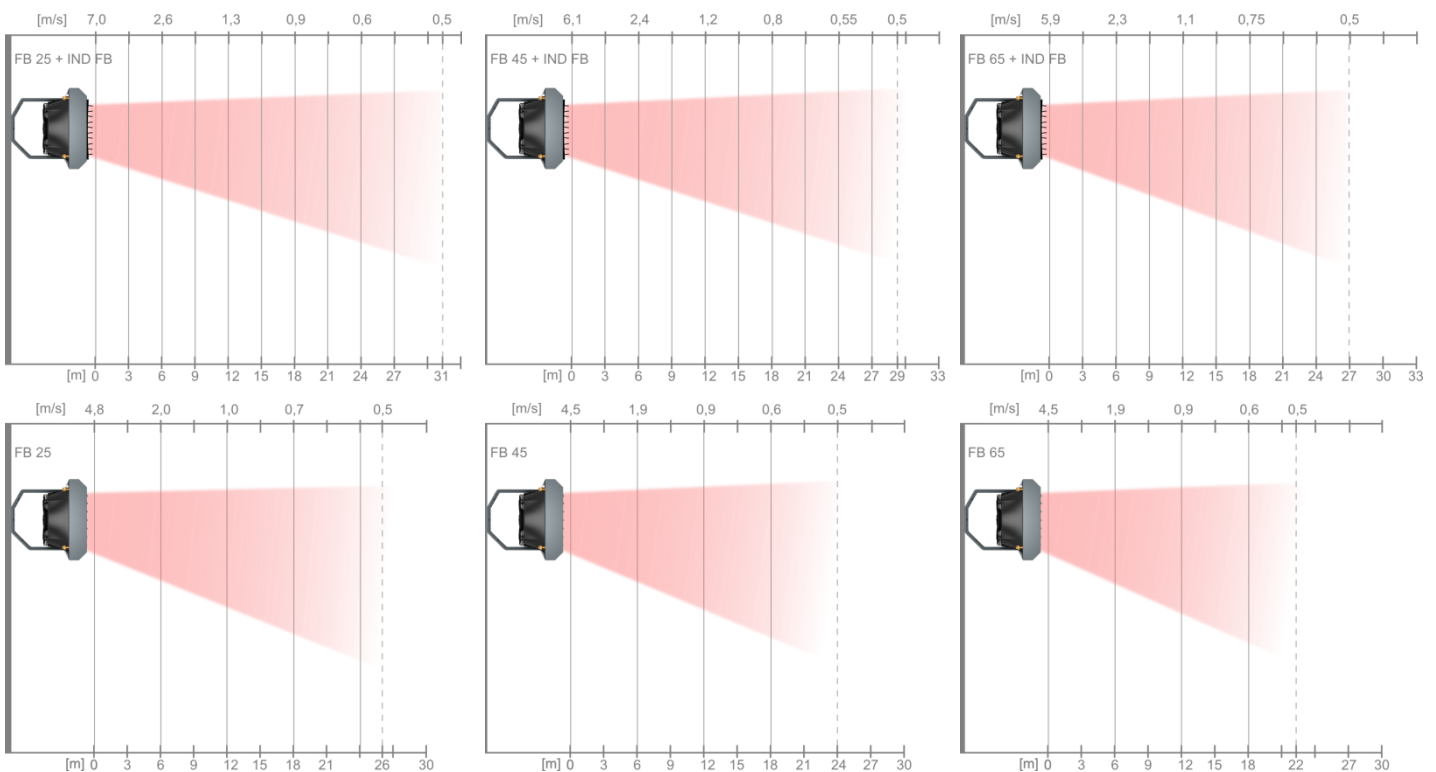

Application of induction blades has an impact on air velocity and unit range. Both parameters significantly increase.

When the heated air stream flows through the blades, they induce the ambient air. Both streams are immediately mixed thus the supply air temperature is being decreased. As an effect the heated air is faster delivered to the area where people stay and the heat flow to the upper parts of the building is limited.

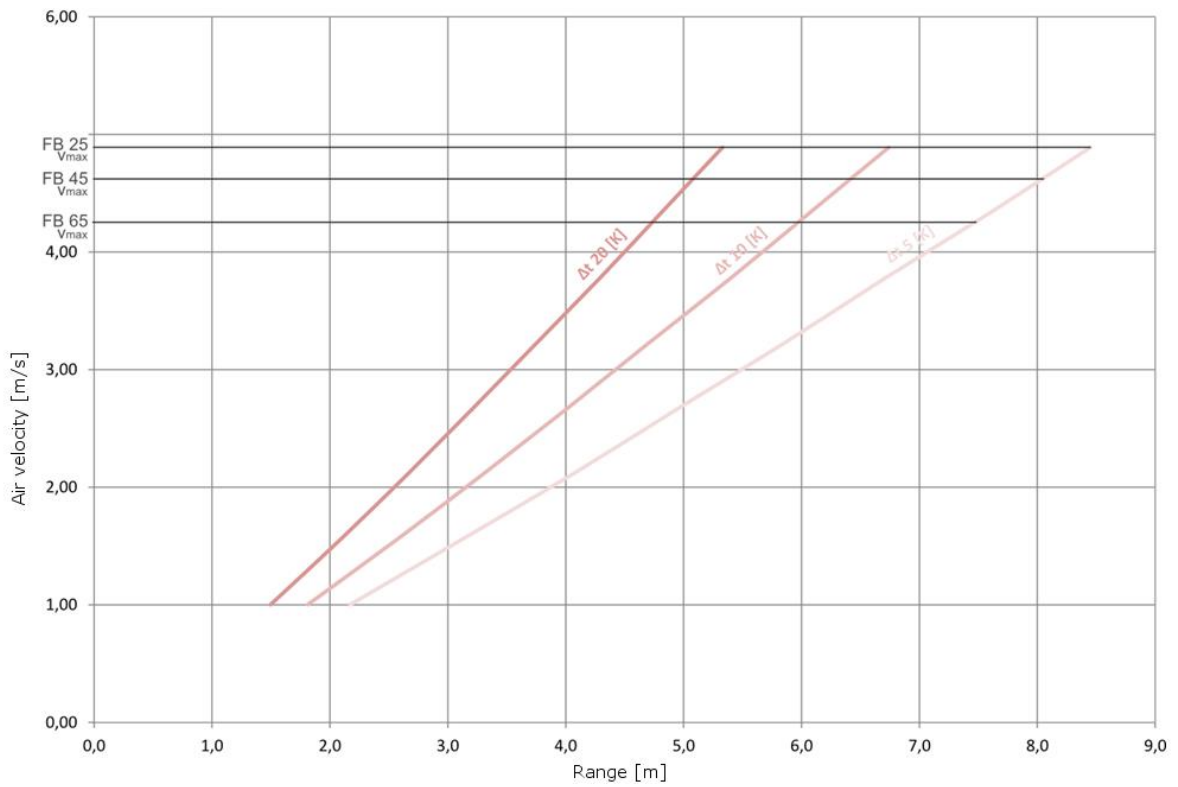

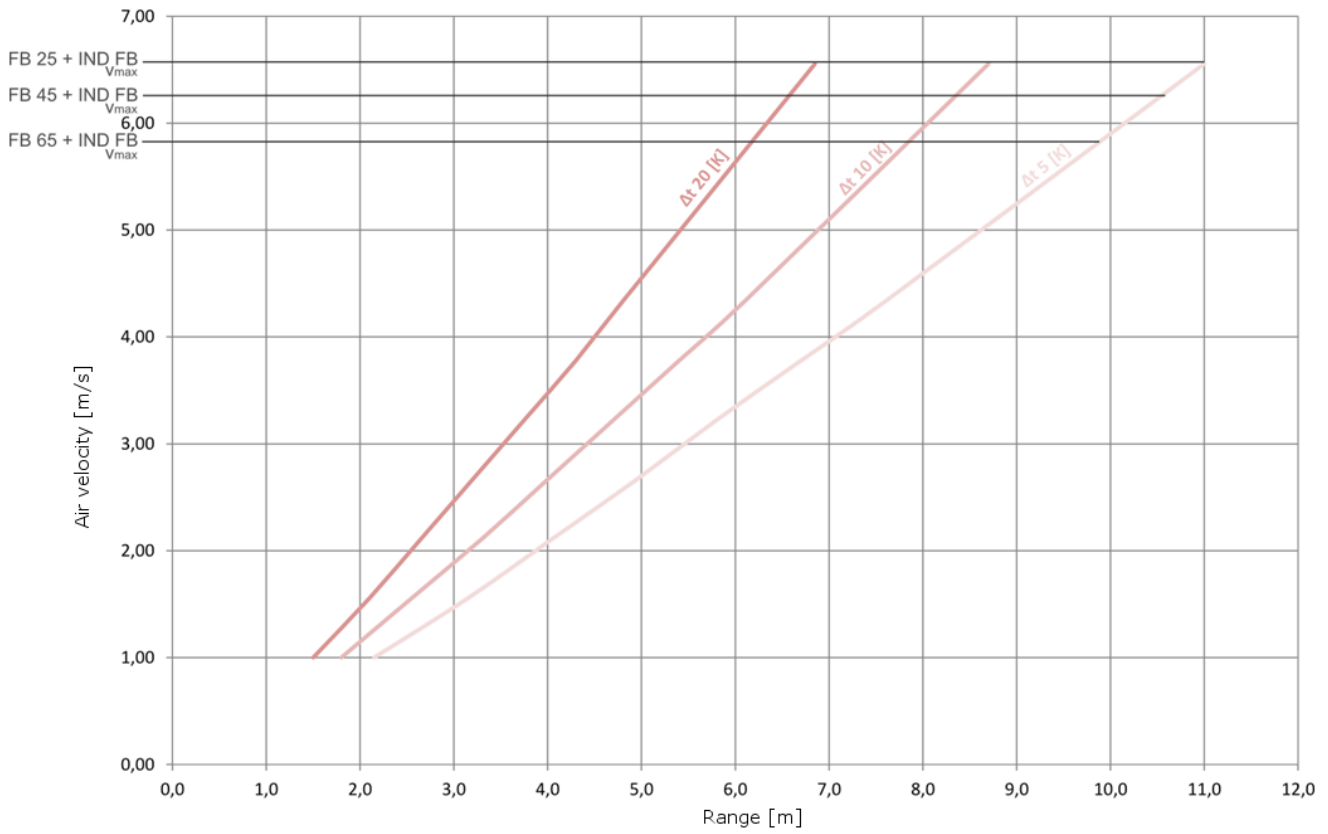

The induction blades are available for LEO FB 25 | 45 | 65.
